

Introducing

AutoDoc HSE

Flexible delivery for a world of documents

AutoDoc HSE saves both time and money through the automated delivery of documents to print - fax - email - archive - sms - xml

Save thousands of dollars

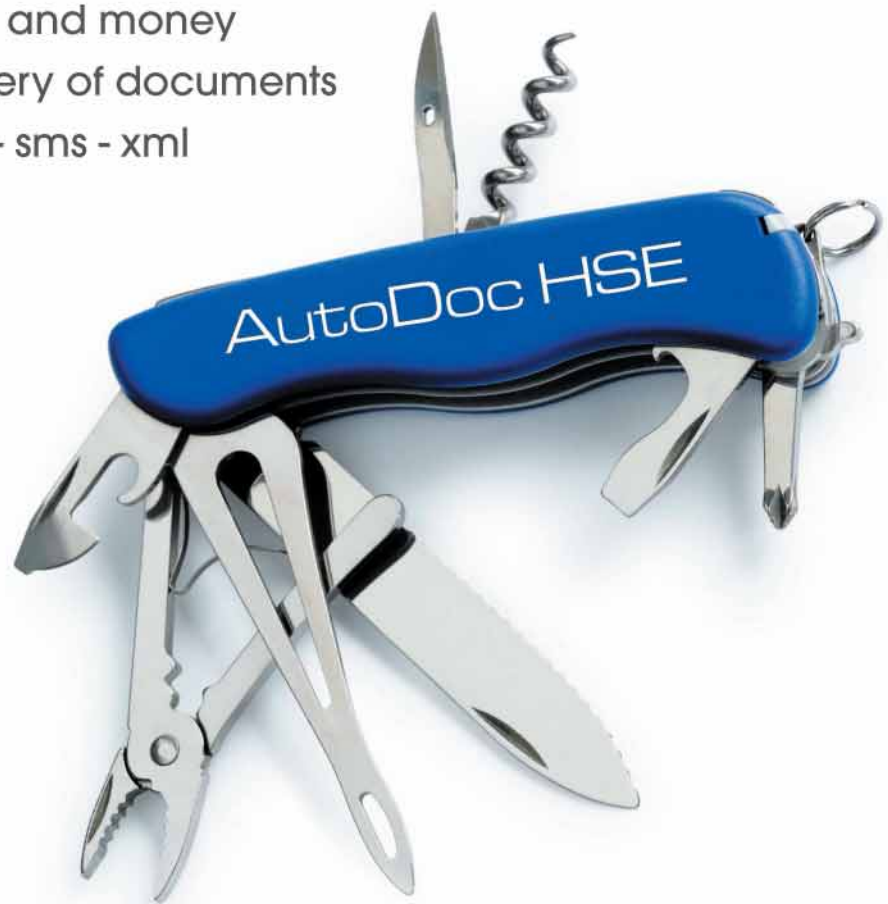

Depending on the number of documents that a business creates each year, AutoDoc HSE can literally save thousands of dollars in man-hours, office consumables, and postage. Time saved in automating invoices, statements, reports, internal forms and remittance advices alone will easily recoup the initial cost of the software in no time. AutoDoc HSE also enables customer service improvement through the ability to automate communication at different sales stages or even deliver a marketing campaign.

Ready to go

Once installed onto a network or workstation it's ready to go. Compatible with most Windows products, users will be able to print and send documents through the shared Virtual Printer, in much the same way as a standard printer. Send personalised HTML emails with secure PDF attachments and dynamic faxes with advanced delivery options, all at the touch of a button.

Archive and Recording

Keeping records has never been easier. Automatically archive each original document and update subsequent changes, creating a directory structure and file name based on user and system variables. All fax, email & print transmissions are recorded in the AutoDoc HSE log.

- > Reduce document delivery costs
- > Generate customized emails
- > Multi platform fax support
- > Dynamic document routing
- > Flexible document archiving
- > Simple integrated features
- > No other software required
- > Value-add your entire IT investment

How it works

The relevant information relating to the delivery of documents is embedded within the individual print job using font colours, (or specific regions), which are then analysed as they pass through the AutoDoc HSE Virtual Printer. These are invisible in the printed form, but allow AutoDoc HSE to build dynamic faxes, emails and archive structures.

lite version

Single User

5 forms
5 variables
PDF attachments

standard version

Single User

5 forms
20 variables
PDF attachments
DOS/PCL support

server version
